REAR VIEW CAMERA SYSTEM

WARNINGS

It remains the driver's responsibility to detect obstacles and estimate the vehicle's distance from them when reversing. Some overhanging objects or barriers, which could possibly cause damage to the vehicle, may not be detected by the camera.

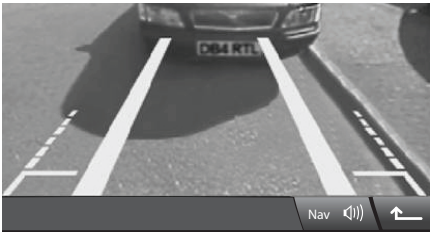

Always be vigilant when reversing.

The rear view camera system provides a rear view image to assist in reversing the vehicle.

LAN2442

The camera is integrated into the rear spoiler and when reverse gear is selected, automatically displays a wide angle, colour image of the view from the rear of the vehicle on the touch screen.

LAN2444

Overlaid on the rear view image are dashed lines representing the perimeter of the vehicle and solid lines representing the predicted path of the vehicle (based on the position of the steering wheel).

Note: *A return icon is displayed in the bottom right hand corner to take the driver back to the previously viewed screen.*

The rear view image will not be displayed when any of the following apply:

- Drive is selected for longer than 15 seconds.
- Drive is selected and the vehicle speed is greater than 18 km/h (11 mph).
