## SAFETY PRECAUTIONS

**WARNINGS**

Petroleum gases are highly flammable, have a low flash point and are explosive, especially in confined spaces. Avoid exposing the gases to any potential source of ignition as the resulting fire and explosion may cause serious injuries and/or death.

Only use containers specifically designed for carrying fuel and always remove them from the vehicle to fill them. Failure to do so may result in spillage and cause a fire.

Switch off the engine when refuelling, as it is both a source of extreme temperatures and electrical sparks. The resulting fire and explosion may cause serious injury and death.

If your vehicle is equipped with a fuel burning heater, ensure it is switched off when refuelling. The resulting fire and explosion may cause serious injury and death.

Switch off any personal electronic devices such as mobile phones, or music players. They have the potential to cause electrical sparks. The resulting fire and explosion may cause serious injury and death.

Do not smoke, use a naked flame, or cause sparks. The resulting fire and explosion may cause serious injury and death.

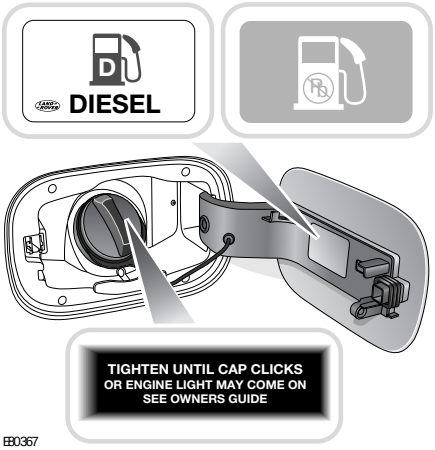

Do not overfill the fuel tank. Overfilling may cause spillage when the vehicle is driven. Spillage may also occur if the fuel expands in high ambient temperatures.

## FUEL SPECIFICATION

**CAUTIONS**

Only use high quality fuel as using a lower quality can cause damage to the engine, fuel and emission control systems.

Fuel system cleaning agents should not be used, unless approved by Land Rover. Unapproved products maybe harmful to fuel system components on your vehicle.

The correct fuel specification for your vehicle is shown on the inside of the fuel filler flap.
