HEADPHONES

The maximum volume available to this type of headphones is limited to the volume set at the rear seat controls.

Note: *Only headphones compatible with a 3.5 mm jack plug socket can be used. To obtain optimum sound quality, use headphones with an impedance of 32 ohms.*

Note: *When the headphones are not connected, the rear seat controls remain operational. It is still possible to select CD, whilst the radio is playing on the audio unit. CD play will remain operational until the mode control is pressed again.*

Note: *The mode in use when the ignition is switched off will resume when the ignition is switched on again within two minutes. If the ignition is switched off for longer than two minutes* ***AUX*** *mode will be selected when the ignition is next switched on.*

Note: *Adjusting the volume on the audio unit, does not alter the head phone volume. The volume of each controller can be adjusted independently.*
