

# Supplementary restraints system

---

After inflation, the front and seat mounted side airbags deflate immediately (curtain airbags deflate slowly). This provides a gradual cushioning effect for the occupants and also ensures that the driver's forward vision is not obscured.

## Disability modifications

Occupants with disabilities that may require the vehicle to be modified must contact a Land Rover Dealer/Authorised Repairer before any modifications are made.

## SIDE AIRBAGS

### WARNING

Ensure that a gap is maintained between the side of the vehicle and the torso, to enable unobstructed inflation of the seat-mounted side airbags.

Side airbags are designed to protect the thorax region of the torso and will only deploy in the event of a severe side impact. They will not inflate as a result of frontal or rear impacts only. The airbags on the non-impacted side of the vehicle will not be deployed.

## CURTAIN AIRBAGS

### WARNING

For the curtain airbags to deploy correctly, the roof lining and A post trim must be undamaged and fitted correctly. Any damage or suspect fitting should be referred to a Land Rover Dealer/Authorised Repairer for examination.

Curtain airbags are designed to protect the head in the event of a severe side impact or rollover event. They will not inflate as a result of frontal or rear impacts alone.
