## Starting the engine

#### STEERING COLUMN LOCK

During vehicle recovery, the Smart Key must remain inside the vehicle, so that the steering column remains unlocked.

Your vehicle is fitted with an electronic steering column lock. The column unlocks when a Smart Key is detected inside the vehicle.

If any malfunction of the steering column lock occurs, **STEERING COLUMN LOCKED** will be displayed in the message centre. If this occurs:

- Lock and then unlock the vehicle using the Smart Key.
- Try again to unlock the steering column lock, by turning the steering wheel gently to the left and right.
- **3.** If the problem persists, seek qualified assistance immediately.

### SWITCHING ON THE IGNITION

To turn on the ignition without starting the engine. Ensure the brake pedal is not depressed, and with a valid Smart Key present in the vehicle, press the START/STOP button and hold until the warning lamps illuminate, then release the button.

If the brake pedal is applied when the start/stop button is pressed, the engine will start.

#### STARTING A PETROL ENGINE

Never start the engine and leave it running when the vehicle is in an enclosed space. Exhaust gases are poisonous and can cause unconsciousness and death if inhaled.

The Smart Key may not be detected if it is placed within a metal container or if it is shielded by a device with a back-lit LCD screen, such as a smart phone, laptop (including laptop bag), games console etc. Keep the Smart Key clear of such devices when attempting Keyless entry or Keyless starting.

To start the engine:

- The Smart Key must be inside the vehicle.
- P or N must be selected.
- Apply the brake pedal.
- Press and release the START/STOP button.

Once the engine has started, the brake pedal can be released if it is safe to do so.

## STARTING A DIESEL ENGINE

Never start the engine and leave it running when the vehicle is in an enclosed space. Exhaust gases are poisonous and can cause unconsciousness and death if inhaled.

The Smart Key may not be detected if it is placed within a metal container or if it is shielded by a device with a back-lit LCD screen, such as a smart phone, laptop (including laptop bag), games console etc. Keep the Smart Key clear of such devices when attempting Keyless entry or Keyless starting.

## Starting the engine

There may be a delay of up to 12 seconds between the START/STOP button being pressed and the engine starting. During this delay period, keep the brake pedal depressed and do not press the START/STOP button a second time. Doing so will cancel the starting procedure. To start the engine:

- The Smart Key must be inside the vehicle.
- P or N must be selected.
- Apply the brake pedal.
- Press and release the START/STOP button.

Once the engine has started, the brake pedal can be released if it is safe to do so.

**Note:** In very cold conditions, it is normal for the engine cranking time to be increased.

### IF THE ENGINE FAILS TO START

If the vehicle has been unlocked using the emergency key blade or the Smart Key is not detected by the vehicle, it will be necessary to use the keyless start backup to disarm the alarm and start the engine.

The keyless start backup can only be used when the message **Smart Key Not Found Place As Shown** is displayed in the message centre.

Position the Smart Key against the underside of the steering column cover with the buttons facing downwards.

**Note:** There are markings on the cover to help locate the correct position.

When the Smart Key is positioned in this area, it will be recognised by the vehicle and the message **Smart Key Recognised** will be displayed in the message centre.

Holding the Smart Key in position and the brake pedal depressed, press and release the START/STOP button to start the engine.

Once the engine has been started, you no longer need to hold the Smart Key against the steering column cover.

**Note:** If the Smart Key is not recognised or the engine still fails to start, consult your Dealer/Authorised Repairer.

**Petrol engines:** If the engine persistently fails to start, make sure the transmission is in **P** or **N** and press the START/STOP button (without applying the brake pedal) to switch on the ignition. Slowly depress the accelerator pedal fully, then hold it in the fully down position and press the START/STOP button with the brake pedal applied. The engine will then begin to crank. Release the accelerator pedal when the engine starts.

If the engine fails to crank, or fails to start, consult your Dealer/Authorised Repairer.

**Diesel engines:** If the engine persistently fails to start, make sure the transmission is in **P** or **N** then press the START/STOP button (with the brake pedal applied). Keep the START/STOP button and the brake pedal pressed until the engine starts, then release.

If the engine still fails to crank, or fails to start, consult your Dealer/Authorised Repairer.

# Starting the engine

## **SWITCHING OFF THE ENGINE**

Never stop the engine when the vehicle is in motion.

Before stopping the engine, ensure that the vehicle is parked safely with the parking brake applied and **P** selected.

Press and release the engine START/STOP button to stop the engine. The audio, telephone and touch screen systems will revert to stand-by mode.

Pressing the START/STOP button again (without pressing the brake pedal), will activate the systems.
