

REPLACEMENT TIRES

WARNING

Always fit replacement tires of the same type, and wherever possible, of the same make and tread pattern.

WARNING

If the use of tires not recommended by Land Rover is unavoidable, ensure that you read, and fully comply with, the tire manufacturer's instructions. Failure to do so may lead to tire failure due to incorrect fitment or use.

Ideally, tires should be replaced in sets of 4. If this is not possible, replace the tires in pairs (both front or both rear). When tires are replaced, the wheels should always be re-balanced and alignment checked.

The correct tire specification for your vehicle can be found on the tire pressure label. See **191, TIRE PRESSURE LABEL (USA only)**.

AVOIDING FLAT SPOTS

In order to minimize flat spotting, the tire pressures can be increased to the maximum as stated on the tire sidewall, for the period when the vehicle is stationary. Tires must be returned to the specified running pressures before driving.

TIRE DEGRADATION

Tires degrade over time due to the effects of ultraviolet light, extreme temperatures, high loads, and environmental conditions. It is recommended that all tires, including the spare, are replaced at least every six years, but they may require replacement more frequently.

USING WINTER TIRES

M+S (mud and snow) marking on the tire sidewall indicates an 'all season' tire designed for use all year round, including cold temperatures, snow and ice.

This symbol identifies dedicated winter tires, which can be fitted if optimum winter traction is required, or the vehicle is to be used in more extreme winter conditions.

Note that the dedicated winter tire often has a lower speed rating than the original equipment tire, and the vehicle must therefore be driven within the speed limitation of the tire.

The tire pressures indicated on the tire pressure label are for use in all conditions on the original equipment tires. If a reduced speed rating tire is fitted, the recommended pressures are only suitable for use below 100 mph (160 km/h).

For optimum traction, tires should be run in for at least 100 miles (160 kilometers) on dry roads prior to driving on snow or ice.

Recommended winter tires are identified in the following table:

Approved winter tires	
19 inch wheels	255/50 R19 107H Dunlop Winter Sport M3
20 inch wheels	275/40 R20 106V Continental Cross Contact Winter

USING SNOW CHAINS

WARNING

Only use traction devices in heavy snow conditions, on hard road surfaces.
