SYSTEM DIFFICULTIES

Use of an incorrect program will impair the vehicle's response to the terrain and can reduce the life of the suspension and drive systems.

If the system becomes partially inoperable for any reason, it may not be possible to select special programs. A warning will be given when selection of a special program is attempted.

If a vehicle special system becomes temporarily inoperable, the general program will be automatically selected. Once the system returns to normal operation, the previously active program will be re-activated unless the ignition has been turned off in the meantime.

If the system becomes completely inoperable, all of the special program indicators will be switched off and a relevant message will be displayed in the message centre.

TERRAIN RESPONSE MESSAGES

Messages relating to the Terrain Response system are displayed in the message centre. See **59, INSTRUMENT PANEL**.

Most of the messages that appear will be for information only and require no driver intervention.
