If the engine is switched off with **N** selected, the system will wait for 10 minutes before selecting **P**. This delay allows the vehicle enough time to be conveyed through a car wash. Do not use for vehicle recovery purposes.

If your vehicles requires recovery by towing, the recovery must be undertaken by qualified personnel. See **241, RECOVERY METHOD**.

IF THE DRIVE SELECTOR FAILS TO ELEVATE

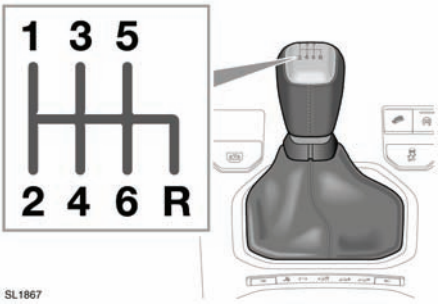

If the drive selector is obstructed, remove the obstruction and then start the engine. The selector should elevate as normal.

If the selector still fails to elevate, even if there is no obstruction, a fault in the system is indicated. The selector can still be used in the lowered position. Ensure that **P** is selected before engine switch off. Have the fault rectified at the earliest opportunity.

TRANSMISSION FAULT

In the event that the transmission develops a fault, a warning message may be displayed in the message centre and only limited gears may become available. You should seek qualified assistance immediately.

MANUAL TRANSMISSION

Selection of reverse gear is prevented when the vehicle is travelling in excess of 24km/h (15mph). Never attempt to engage reverse gear while the vehicle is in forward motion. This may result in serious transmission damage and costly repairs.

GEAR SHIFT INDICATOR

The gear shift indicator illuminates briefly at the recommended gear change point (upshift).

The shift indicator will not illuminate while Cruise control is active and is not being overridden by pressing the throttle pedal.

Note: *This indicator is only a guide. It remains the responsibility of the driver to operate the vehicle in an appropriate manner for the prevailing conditions.*
