Note: *The headlamps are washed alternately to prevent the washer fluid from reducing the light output from both headlamps simultaneously.*

REAR WIPER

If reverse gear is selected while the front wipers are operating, the rear wiper will start automatically and continue as long as reverse gear is selected. The wipe interval is dependent on the front wipers setting.

If reverse gear is selected while the rear wiper control is in the INT position, the wiper will operate for a single sweep of the rear screen.

When stationary, if the tailgate is opened while the rear wiper is operating, the wiper will stop. When the tailgate is closed, the wiper will start to operate again after a delay of three seconds.

If the tailgate is open and vehicle speed is above 3 km/h (2 mph) the wiper will operate normally.

WIPER BLADE REPLACEMENT

This subject is covered in the Maintenance section. See **192, WIPER BLADE REPLACEMENT**.
