## Starting the engine

If the Smart Key is not recognised, or the engine still fails to start, consult a Land Rover Dealer/Authorised Repairer.

If the engine still fails to crank or start, consult a Land Rover Dealer/Authorised Repairer.

## IF THE ENGINE FAILS TO START

**Note:** If the engine fails to crank when the engine START/STOP button is pressed and there has been a recent collision, the fuel system inertia switch may have been tripped. Seek qualified assistance.

Make sure that the brake pedal is not depressed. Switch on the ignition (see **96**, **STARTING THE ENGINE**) and check the instrument panel for warning lights and the message centre for warning messages (see **62**, **INSTRUMENT PANEL**). Seek qualified assistance if necessary.

Switch off the ignition.

To reset the immobiliser and alarm system use the valid smart key to lock and unlock the vehicle (see **4. UNLOCKING THE VEHICLE**).

**Note:** The following information applies to petrol engine vehicles only.

If the engine persistently fails to start.

- 1. Make sure that a valid Smart Key is inside the vehicle.
- 2. Firmly depress the brake pedal.
- **3.** Ensure that Park (**P**) or Neutral (**N**) is selected.
- Press and hold the engine START/STOP button until the warning lamps illuminate.
- **5.** Slowly depress the accelerator pedal fully and hold it in the fully depressed position.
- **6.** Press and release the engine **START/STOP** button. The engine will begin to crank.
- **7.** Release the accelerator pedal when the engine starts.

Once the engine has started, the brake pedal can be released if it is safe to do so.
