

SUSPENSION LOWERED FOR SAFETY

The vehicle ride height will be reduced.
Exercise caution while driving off-road.

In the event of a fault with the DSC system, the ride height will be lowered to increase vehicle stability. This will be accompanied by a message in the message centre and the indicators on the air suspension control switch will extinguish.

The suspension is lowered to increase vehicle stability and overriding the suspension ride height reduction is not recommended. Doing so could result in a vehicle rollover during extreme manoeuvres.

To override the ride height reduction:

1. Press the raise/lower switch.
2. Follow the instructions in the message centre.

Note: *If the vehicle is driven enthusiastically while the system override is active, a message will be displayed in the message centre as a reminder that a safety system has been bypassed. A further message will provide instructions for cancelling the override.*
