Note: *If wiper blades become stuck or jammed, an electronic cut-out will temporarily halt wiper operation. If this happens, switch off the wipers and the ignition. Clear any obstructions and free the wiper blades, before attempting to switch on the ignition.*

Speed-dependent intermittent wipe and drip wipe on the front screen and intermittent wipe on the rear screen can be enabled/disabled by a Land Rover Dealer/Authorised Repairer.

SPEED-DEPENDENT MODE

If vehicle speed drops below 8 km/h (5 mph) with the wipers operating, the wipers will switch to the next lowest speed. When vehicle speed increases to over 8 km/h (5 mph), the original wiper speed setting is restored automatically.

This feature can be enabled/disabled by your Dealer/Authorised Repairer.

In vehicles not fitted with a rain sensor, the frequency of intermittent wipe adjusts according to vehicle speed.

The intermittent delay period can be adjusted via the collar on the wiper stalk, but will also reduce automatically as vehicle speed increases.

This feature can be enabled/disabled by your Dealer/Authorised Repairer.

RAIN SENSOR

Ensure that the wipers are switched off before entering a car wash. If the rain sensitive wipers operate during the car washing process, damage may occur to the wiper mechanism.

The rain sensor is able to detect the presence and amount of rain/dirt/snow on the windscreen and automatically activates the windscreen wipers accordingly. Static droplets may not be detected on initial start-up. A single wipe should be used to clear the screen.

To activate the rain sensitive wipers, move the wiper stalk to the rain sensor position and adjust the sensitivity control as required (see **41, WIPER OPERATION**). When rain sensitive wipers are activated and when sensitivity is increased, a single wipe will operate.

HEADLAMP WASHERS

If the headlamps are on, and there is sufficient liquid in the washer reservoir, operating the screen wash will also power-wash the headlamps.

The headlamp power wash will operate on every fifth operation of the screen washer, provided the headlamps are still switched on and approximately 10 minutes have elapsed since the last headlamp wash.

Switching the headlamps or ignition off and back on again, will reset the cycle.

Note: *The headlamp washers are inhibited when the washer fluid reservoir level is low.*

WINTER PARK POSITION

The wipers can be set to park in a higher position than normal. This allows the wiper blades to be lifted from the screen to prevent freezing. The 'Wipers winter park' option can be selected from the **Vehicle Set-Up** menu. See **43, INSTRUMENT PANEL MENU**.
