

SOLAR ATTENUATING GLASS

This type of windshield filters sunlight passing through a special laminated layer.

Electronic actuating cards such as toll road pay cards can be fixed at two dedicated locations on the inside of the windshield. If cards are located at any other part of the windshield, electronic scanners may not recognize them.

Fixing locations are at the top of the screen either side of the rear view mirror. The locations are highlighted by tinted areas.

The graphic below is looking at the windshield from the front of the vehicle.
