

The mirrors can be configured by your Dealer/Authorised Repairer to automatically fold when the vehicle is locked, and unfold when it is unlocked.

MIRROR DIP WHEN REVERSING

Selecting Reverse (**R**) gear will cause the door mirrors to automatically adjust, providing an improved viewing angle for reversing.

The exact dipped position can be adjusted when the mirrors are dipped. The next time Reverse (**R**) is selected, the newly adjusted position will be selected.

When the gear selector is moved out of Reverse (**R**), the mirrors will return to their previous position.

Note: *If the vehicle's speed exceeds 7 km/h (4 mph) in reverse, the mirrors will return to their normal driving position for enhanced visibility.*

The automatic Mirror dip feature can be enabled or disabled using the **Vehicle Set-Up** menu. See **31, INSTRUMENT PANEL MENU**.
