If a system fault is detected the headlamps will attempt to move to the central position, and remain stationary. The AFS warning lamp will illuminate to indicate that a fault is present. See 52, ADAPTIVE FRONT LIGHTING SYSTEM (AMBER).

HEADLAMPS - DRIVING ABROAD

The headlamps have a beam pattern that eliminates the need to mechanically adjust the lamps or add any external stick-on decals.

To configure the High beam assist system for the side of the road on which you are driving, proceed as follows:

- Using the menu control on the steering wheel, select Vehicle set-up via the Instrument panel menu.
- 2. Select High Beam Assist.
- Select Drive on Left or Drive on Right, for the side of the road that you are driving.

HEADLAMPS - CONDENSATION

Misting of lamp lenses can occur under some atmospheric conditions. This will not affect the performance of the lamps and will clear during normal operation.
