

## BEFORE STARTING OR DRIVING

**If the vehicle is involved in a collision it should be checked by a Dealer/ Authorised Repairer, or suitably qualified persons, before starting or driving.**

## EVENT DATA RECORDING

Event Data Recorders (EDRs) are capable of collecting and storing data during a crash or near-crash event. The recorded information may assist in the investigation of such an event. The EDR may record information about vehicle dynamics and safety systems, potentially including such information as:

- How various systems in your vehicle were operating.
- Whether or not the driver and passenger seat belts were buckled.
- How far, if at all, the driver was pressing the accelerator and/or brake pedal.
- How fast the vehicle was travelling.

To access this information special equipment must be connected directly to the recording modules. Land Rover do not access EDR information without obtaining consent unless pursuant to a court order or where required by law enforcement, other government authorities or third parties acting with lawful authority.

Other parties may seek to access the information independently of Land Rover.

**Note:** *No personal data (e.g., name, gender, age and crash location) are recorded.*

## SERVICE DATA RECORDING

Service data recorders in your vehicle are capable of collecting and storing diagnostic information about your vehicle. This potentially includes information about the performance or status of various systems and modules in the vehicle such as engine, throttle, steering, or brakes.

In order to properly diagnose and service your vehicle, Land Rover and service and repair facilities may access vehicle diagnostic information through a direct connection to your vehicle.
