

- **SEEK** - only the strongest stations will be stored during auto-store.
- **Off** - manual seek.
- Long press - to auto-store the current frequency. Up to six Radio Frequencies can be stored in presets **1-6**.

RADIO DATA SYSTEM (RDS)

RDS is a radio information system available from FM broadcasts. RDS allows reception of information, such as traffic information and station names, and also allows automatic re-tuning to a stronger transmitter that is broadcasting the same programme.

1. Press and hold the **AUDIO/SETUP** button to open the setup menu.
2. Select **TUNER**.
3. The following options are now available for selection.
 - **AF** - Alternative Frequencies. Select **ON** or **OFF**.
 - **REGIONAL** - Regional programming. Select **ON** or **OFF**.
 - **PI SEEK** - Programme information seek. Select **ON** or **OFF**.
4. Press and hold **AUDIO/SETUP** to close the setup menu.
