- **SEEK** - only the strongest stations will be stored during auto-store.

- **Off** - manual seek.

- Long press - to auto-store the current frequency. Up to six Radio Frequencies can be stored in presets **1**-**6**.

RADIO DATA SYSTEM (RDS)

RDS is a radio information system available from FM broadcasts. RDS allows reception of information, such as traffic information and station names, and also allows automatic re-tuning to a stronger transmitter that is broadcasting the same programme.

1. Press and hold the **AUDIO/SETUP** button to open the setup menu.

2. Select **TUNER**.

3. The following options are now available for selection.

   - **AF** - Alternative Frequencies. Select **ON** or **OFF**.

   - **REGIONAL** - Regional programming. Select **ON** or **OFF**.

   - **PI SEEK** - Programme information seek. Select **ON** or **OFF**.

4. Press and hold **AUDIO/SETUP** to close the setup menu.
