

Standard audio system

1. 3.5 mm AUX socket.
2. USB socket.

Connect the device into the appropriate socket.

Note: Use the cable supplied with your media device to connect to the USB socket.

When an iPod is connected, playback will continue from the point at which it was last playing, provided the iPod battery is in a good state of charge.

If a USB or **Bluetooth**® device is already connected when **AUX** is selected, playback will continue from the point at which it was last playing.

Please refer to the Ownership section of the Land Rover website at: www.landrover.com, for a list of compatible devices.

The **Bluetooth**® equipped devices listed on www.landrover.com have been tested for compatibility with Land Rover vehicles. Performance will vary, based on the device's software version and battery condition. Devices are warranted by their manufacturer; not Land Rover.

 Do not plug non-audio devices into the USB port.

TELEPHONE SYSTEM

 **Switch off your telephone in areas with a high explosion risk. This includes filling stations, fuel storage areas or chemical factories, as well as places where the air contains fuel vapour, chemicals or metal dust.**

 **Always stow your mobile phone securely.**

The functioning of cardiac pacemakers or hearing aids may be impaired when the phone is in use. Check with a doctor or manufacturer whether any such devices you or your passengers are using, are sufficiently protected against high-frequency energy.

The Health Industry Manufacturers' Association recommends that a minimum separation of 15 cm (6 in) is maintained between a wireless phone antenna and a pacemaker, to avoid potential interference with the pacemaker. These recommendations are consistent with the independent research by, and recommendations of, Wireless Technology Research.

PAIRING AND DOCKING A MOBILE PHONE

Bluetooth® is the name for short-range Radio Frequency (RF) technology that allows electronic devices to communicate wirelessly with each other.

The Land Rover **Bluetooth**® system supports **Bluetooth**® Hands-Free Profile (HFP), Advanced Audio Distribution Profile (A2DP) and Audio Video Remote Control Profile (AVRCP).

Note: HFP and A2DP/AVRCP profiles can be connected independently, so a phone can be connected via one, while a media device can be connected via the other, at the same time.

Before making use of the vehicle's **Bluetooth**® phone system, your **Bluetooth**® phone must be paired and connected to the vehicle's system.

Note: The process of pairing and docking your phone with the vehicle using the mobile phone, will vary depending on the type of mobile phone used.

For telephone compatibility, see **105**, **TELEPHONE COMPATIBILITY**.
