## **TYRE MARKINGS**

- P indicates that the tyre is for passenger vehicle use. This index is not always shown.
- **2.** The width of the tyre from sidewall edge to sidewall edge in millimetres.
- The aspect ratio, also known as the profile, gives the sidewall height as a percentage of the tread width. So, if the tread width is 205 mm and the aspect ratio is 50, the sidewall height will be 102 mm.
- **4. R** indicates that the tyre is of Radial ply construction.
- **5.** The diameter of the wheel rim given (in inches).
- **6.** The load index for the tyre. This index is not always shown.

⚠

The load index and speed rating on all replacement tyres must be, at least, the same specification as the vehicle's original equipment. If in doubt consult a Dealer/Authorised Repairer.

- The speed rating denotes the maximum speed at which the tyre should be used for extended periods. See 240, SPEED RATING.
- 8. Tyre manufacturing standard information, which can be used for tyre recalls and other checking processes. Most of this information relates to the manufacturer, place of manufacture etc. The last 4 numbers are the date of manufacture. For example, if the number was 5111, the tyre was made in the 51st week of 2011.
- M+S or M/S indicates that the tyre has been designed with some capability for mud and snow.
