

3. On each side, pull the airbag centre panel as tight as possible. Using the velcro panels, attach the straps on the centre airbag panel (3) to the airbag cover straps (4).

Following repacking, if safe to do so, the vehicle should be driven with caution to a Dealer/Authorised Repairer to be checked for damage and for the replacement of the Pedestrian airbag.

EVENT DATA RECORDING

This vehicle is equipped with an Event Data Recorder (EDR). The main purpose of an EDR is to record, in certain crash or near crash-like situations, such as an airbag deployment or hitting a road obstacle, data that will assist in understanding how a vehicle's systems performed. The EDR is designed to record data related to vehicle dynamics and safety systems for a short period of time, typically 30 seconds or less. The EDR in this vehicle is designed to record such data as:

- How various systems in your vehicle were operating.
- Whether or not the driver and passenger seat belts were buckled/fastened.
- How far, if at all, the driver was pressing the accelerator and/or brake pedal.
- How fast the vehicle was travelling.

To access this information special equipment must be connected directly to the recording modules. Land Rover do not access EDR information without obtaining consent unless pursuant to a court order or where required by law enforcement, other government authorities or third parties acting with lawful authority.

Other parties may seek to access the information independently of Land Rover.

Note: No personal data (e.g., name, gender, age and crash location) are recorded.

South Korea Only

Please be advised that this vehicle incorporates an Event Data Recorder (EDR). An EDR stores driving information at the moment of accident (driving speed, application of brake pedal and accelerator control etc.), and enables to confirm the information stored. EDR information helps understanding the circumstances of accident more clearly.

SERVICE DATA RECORDING

Service data recorders in your vehicle are capable of collecting and storing diagnostic information about your vehicle. This potentially includes information about the performance or status of various systems and modules in the vehicle such as engine, throttle, steering or brakes.

In order to properly diagnose and service your vehicle, Land Rover and service and repair facilities may access vehicle diagnostic information through a direct connection to your vehicle.
