

## ⚠ WARNING

If wheel spin is unavoidable due to a loss of traction (in deep snow for example), do not exceed the 30 mph (50 km/h) point on the speedometer. Do not allow anyone to stand near, or directly behind a tire that might spin.

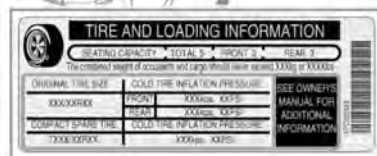

## ⚠ WARNING

Do not exceed the maximum pressure stated on the sidewall of the tire.

**Note:** Tire condition should be checked after the vehicle has been used off-road. As soon as the vehicle returns to a normal, hard, road surface, stop and check for tire damage.

All of the vehicle's tires (including the spare) should be checked regularly for damage, wear and distortion. If you are in any doubt about the condition of a tire, have it checked immediately by a tire repair center or your Retailer/Authorized Repairer.

## TIRE PRESSURE LABEL

E 107373

1. United States of America.
2. Canada.

The recommended tire pressures are listed on a label located in the driver's door opening.

The label contains the following information:

- The maximum number of occupants, divided between the front and the rear of the vehicle.
- The vehicle's capacity weight, which includes the weight of the driver, passengers and cargo.
- Cold inflation pressures for the front, rear and spare tires.
