Approved winter tyres (SVR vehicles only)			
Wheel size	**Tyre size**	**Brand**	**Pattern**
21 inch wheels	265/45 R21 108T*	Continental	Cross Contact Winter
22 inch wheels	275/40 R22 108V	Continental	Cross Contact Winter

Note: **. Studded and non-studded tyres available. Studded tyres are market dependent. Consult a Retailer/Authorised Repairer.*

Note: *For more information on winter tyres for SVR vehicles, consult your Retailer/Authorised Repairer.*

Note: *The vehicle's speed should be limited to a maximum of 160 km/h (100 mph) heavy load, and 200 km/h (125 mph) light load, when recommended winter tyres are fitted. Failure to comply with this speed restriction will mean that the tyres are underinflated for the vehicle's speed. In addition the TPMS will fail to warn of underinflation at the correct pressure thresholds for these higher speeds. Contact your Retailer/Tyre distributor for the supply of an appropriate label, which should be placed within the driver's field of vision, as a reminder of this speed restriction.*

Use of dedicated winter tyres may require a change of wheel size, depending on original choice of wheel. All four wheels must be changed.

For more information on winter tyres, contact your Retailer/Authorised Repairer.

ULTRA HIGH PERFORMANCE (UHP) TYRES

High performance low profile wheel and tyre combinations

Your vehicle may be equipped with high performance low profile wheel and tyre combinations. These low profile high speed rated tyres may be more susceptible to damage from road hazards, and may not give optimum performance on snow and ice; for improved performance winter tyres should be fitted when conditions dictate.

Ultra high performance summer tyres

Your vehicle may be equipped with the optional high performance 275/40 R22 108Y or 275/45 R21 110Y summer tyres, which offer improved on-road performance.
